

# Impervious Surface Calculation Sheet

*This calculation sheet is a necessary attachment for all land use/building permit applications in shoreland and residential zoning districts. Because of the impact of storm water runoff on surface water, the Kandiyohi County Zoning Ordinance limits the amount of impervious surface coverage allowed in shoreland and residential areas. In order to assure compliance with this regulation, an **accurate calculation** of the amount of impervious surface coverage is needed. A short definition of impervious surface is “any constructed hard surface that prevents or retards the flow of water into the soil”. **Examples of impervious surfaces include rooftops, sidewalks, parking lots, patio, and roads or driveways made of asphalt, concrete or gravel. Please complete the following information:***

**Lot Dimensions:** \_\_\_\_\_

**Total Lot Area:** \_\_\_\_\_

### Use the following Table to Calculate Total Impervious Surface Area:

(Complete all that apply)

Impervious Surface Item	Dimensions	Area (ft <sup>2</sup> )
Proposed or Existing House		
Proposed Addition		
Proposed Accessory Building or Garage		
Existing Garage		
Existing Accessory Building 1		
Existing Accessory Building 2		
Sidewalk(s)		
Patio(s)		
Driveway and Parking Area Including Gravel Surfaced Areas		
Other		
		<b>Total:</b>

**Attach additional sheet as necessary**

I certify that the above information is true and accurate to the best of my knowledge and that I have included all existing or proposed impervious surfaces. I understand that supplying erroneous information may result in the need to remove impervious surfaces if it is discovered that the maximum coverage has been exceeded.
